

SUCCESS STORIES

DAILY INVENTORY MANAGEMENT MAXIMIZES EFFICIENCY

**0% | SHORTAGE
RATE**

Innovative supply solutions often lead to streamlined processes and lean manufacturing cost trimming. In one particular case, we achieved a landmark 0% shortage rate.

PROBLEM

When manufacturing production line shortages happen, business objectives and productivity suffer. We worked with a customer to eliminate and prevent production line shortages and delays through printed material, labels and kitted materials in addition to standard fastenings.

SOLUTION

Our team developed the right inventory management program mix, establishing one single point of control for all material receipt, storage and deployment. Once agreed, locally based envoys began providing daily line service immediately, to ensure there were no gaps.

RESULT

The customer enjoyed a reduced capital investment in components and was able to increase facility space while redeploying freed up workforce for better customer service.
